

C.R.D. Chrome Roller Desensitizer

C.R.D. is a product used to desensitize all dampening rollers, chrome as well as rubber. It is a combination of micro-filtered gums and desensitizers. It will prevent ink build-up on dampening rollers and will improve water receptivity of the dampening rollers, allowing the dampening rollers to carry more water to the plate.

Recommendation for use:

First clean off the dampening rollers with a proper Metering Roller Cleaner, like MRC88. Then apply an adequate amount of C.R.D. to a shop towel, coat the chrome roller, by wiping the shop towel in a side-to-side motion over the entire surface of the roller, until the entire roller has been treated. Treat all dampening Rollers in a similar manner.

Physical and chemical properties:

- Appearance: Viscous liquid
- Solubility: Miscible in water
- VOC: 0 g/l
- Colour: White
- Boiling point: 100°C
- pH concentrate: 2.2
- Odour: No particular odour
- Relative density: 1.00 @ 20°C
- Flash point: No flash
- Packaging: 1 liter/1 box x 12 liters

Advantages:

- Will completely desensitize the dampening rollers
- Will minimize ink build-up on all dampening rollers
- Will allow the dampening rollers to carry more water to the plate
- Will maintain a uniform thin water film on the dampening rollers
